SPECIAL DISCOUNT BEFORE THE APPLICATION HITS THE ANDROID MARKET

Due to limitations on Android Market in Finland, BookDroid cannot be sold through Android Market yet. Because this inconvenience we are offering a special discount for the application before it is released through the Android Market, so be sure to grab it now. We are sorry because we have to circumvent the selling through a third party, but alas when Android Market accepts payments in Finland, we will release it fully through Android Market. Those who will buy the application now will receive all the updates for free just like those who will buy it from market.

Instructions how to buy and obtain the application, see <http://www.absent.fi/mobile/buy>

BookDroid is developed by Santtu Syrjälä and published by Absent Oy.
